Important Notice for Employees

Always check in immediately upon starting work. All daily tasks must be submitted and synced to guarantee correct working hour tracking. Carry forward leaves accumulate at a rate of 1.0 day/month.

1. INTRODUCTION

Employee Guide

Introduction to the Portal

The **PeriFerry Employee Portal** is a standalone, desktop application designed to track tasks, organize projects, and record attendance. The portal coordinates tasks using a local-first interface, linking directly to a centralized spreadsheet backend via Google Apps Script.

Key Core Capabilities

Our portal helps you coordinate your day-to-day workflow with maximum efficiency:

- **Attendance Log-In & Log-Out:** Precise record of check-in and check-out timestamps, showing active durations.
- **Daily Task Planner:** Input task targets at check-in that automatically populate your Kanban columns.
- **Unsaved local buffer:** Move, complete, and add tasks without waiting for network spinners. Everything updates instantly!
- **Bulk Sync Action:** Sync all task shifts and updates in a single click, saving bandwidth and system speed.

2. INSTALLATION WIZARD

Employee Guide

One-Click Installation Guide

To deploy the portal on your local system, you no longer need complex command prompts, environment setup, or copy-pasting Google Apps Script URL configuration files.

Installing the Application

Follow these quick setup steps to prepare your portal workspace:

- 1 Download the standalone installer file: **PeriFerry Employee Portal Setup.exe**.
- 2 Double-click the setup file to launch the installation wizard. A beautiful setup console decorated with the official company logo will appear.
- 3 Click the primary **"Install Now"** button. The wizard automatically:
 - 4 Copies binary assets to your user profile (%LocalAppData%\PeriFerry Employee Portal).
 - 5 Bypasses standard administrator prompt restrictions (no admin privileges required).
 - 6 Pre-configures the spreadsheet connection URL so you never have to input it manually.
 - 7 Injects launch shortcuts onto your **Desktop** and Windows **Start Menu**.
- 8 Once setup is complete, double-click the desktop shortcut to launch the app!

3. DAILY ATTENDANCE

Employee Guide

Check-in / Check-out Routine

The daily workflow routine begins and ends with check-in and check-out logs. Entering incorrect check-in steps will lead to inaccurate duration statistics on your working sheets.

Logging Check-In

- 1 Open the app, write your unique employee credentials, and click **"Sign In"**.
- 2 In the top right banner, click the blue **"Log In"** button.
- 3 The portal shifts focus to the **"Plan Your Day"** inputs. Enter the sub-task descriptors you intend to work on today, clicking **"Add Task Row"** to append entries.
- 4 Click **"Submit Daily Plan"**. This logs your starting check-in timestamp and loads the task board.

Logging Check-Out

- 1 Click the red **"Log Out"** button in the Welcome bar.
- 2 The Daily Summary box will automatically compose a description list of all tasks you completed during the shift.
- 3 Adjust the summary if necessary, then click **"Confirm Check-Out"**. Your check-out timestamp is saved, session timer ceases, and task cards clear.

4. KANBAN TASKS WORKSPACE

Employee Guide

Managing Your Kanban Board

All tasks submitted during check-in automatically populate the **"To Do"** column of your board. You can control, organize, and transition these tasks throughout the day.

Kanban Column Roles

- **To Do:** Tasks planned for the day, awaiting execution.
- **In Progress:** Tasks currently being processed. You should shift tasks here to represent active focus.
- **Completed:** Finished tasks. Items placed here are automatically compiled into your daily summary list during check-out.

Transitioning Tasks Locally

Instead of lagging system performance with slow network overlays, task shifts are updated instantly in the local UI buffer:

- 1 To begin a task, click the **"Start Task"** button. The card moves instantly to "In Progress".
- 2 To complete a task, click the green **"Complete"** button. The card moves instantly to "Completed".
- 3 To move a task back, click the **"Move Back"** button.

5. LOCAL CHANGES & SYNC

Employee Guide

Synchronizing Workspace Changes

To offer a fluid, responsive user experience, the portal uses a **Local-First Buffer** for Kanban actions. Changes are stored locally in application memory, avoiding network lag while you work.

The Unsaved Sync Indicator

When you modify tasks (e.g., move a card, complete an item), a blue indicator button appears in the top-right corner of the Kanban container:

Sync Changes (X) Button

The button shows the count of changes (X) currently queued in the local buffer waiting to write to the server database.

Syncing Your Changes

- 1 Organize, drag, or complete your tasks locally as needed.
- 2 Once you are ready to write these updates to the server, click the blue **"Sync Changes (X)"** button.
- 3 A loader will display briefly as the app packs all moves into a single, highly optimized batch request.
- 4 A "Task board changes synced successfully!" alert confirms that your progress has been safely logged. The button will disappear.

Crucial Sync Rule

Always click the "Sync Changes" button before closing the application or checking out. Unsynced changes will not register on sheets database reports!

6. TROUBLESHOOTING & FAQs

Employee Guide

Troubleshooting Guidelines

Here are standard guidelines and solutions for common questions regarding application behavior.

Frequently Asked Questions

Q: Why does my check-in time display Na:Na:Na or missing values?

A: This occurs due to cached browser session issues. To resolve it, sign out using the logout icon in the top header panel, close the application, reopen it, and sign back in to start a clean session.

Q: What happens if I forget to click "Sync Changes" before closing the app?

A: Unsynced moves will remain in the local app cache. When you log back in on the same machine, the changes will load, but the spreadsheet database will not show them until you click the Sync button.

Q: How do my leaves accrue?

A: Casual leaves carry forward to the next month and accumulate at a rate of 1.0 day per month (accrual starts fresh from July 2026). Medical leaves accrue at 1.0 day/month but do not carry forward.

Tech Support

For persistent issues, spreadsheet link overrides, or credential changes, please contact your System Developer or HR Manager.
